

Climate Title: See the World Around You

Description: Senses of the Environment

Goal: Stand still in your environment. What sights are familiar and what are different? What colours do you see? What patterns can you identify? What are other unique characteristics that stand out? Learn to recognize your surroundings and place yourself in your environment.

[Tip] Look for unique features and landmarks around you. “I see a big fallen tree”.

Why? Understanding how your environment changes around you helps to develop awareness of how your environment is impacted locally. Visual learning helps us make sense of our surroundings and how we should react to them.
